Subject Index to Volume 8

A
Active filters, 709–721
Activity/events, 97–99
Adaption, 261–269
Al in networks, 703–708
Alarm Management, 461–467
Artificial
    intelligence, 319–331, 345–354, 601–613, 709–721
    neural networks, 25–34, 71–80, 211–221, 515–525
ART2 neural network, 569–578
Assembly sequences, 129–145
Automated
    assembly, 1–13
    document processing, 469–472
Automatic
    scheduling tools, 681–688

    state acquisition, 157–168
Autonomous vehicles, 271–280

B
Backpropagation algorithms, 211–221
Bioreactor control, 689–701
Book Reviews, 101–102, 229–230, 365, 589–591, 723
Bridge
    design, 435–447
    structures, 211–221

C
Case-based reasoning, 561–567
Characteristics of expert control systems, 413–421
Circuits and systems, 709–721
Classification, 191–199, 223–227
Clustering, 223–227, 539–547
Codification schemes, 15–24
Combinatorial optimization, 223–227
Communication networks, 61–69
Conceptual
    distances, 391–399
    process design, 115–127
Concurrent programming, 169–175
Consistency, 251–260
Constraint logic programming, 379–390
Control software, 671–680
Criticism, 435–447
Curve fitting, 177–189
Cycles, 539–547

D
Damage detection, 211–221
Data Relay Satellites, 147–156
Data-driven strategies, 449–460
Databases, 449–460
Decentralized control, 201–209
Decision tree classifiers, 391–399
Decomposition, 201–209
Delta operator, 633–642

Design principles, 527–537
Determination of synchronization among multiple terminal states, 157–168
Development methods, 527–537
Dynamic systems, 71–80

E
Economic power dispatch, 665–670
Eddy currents, 309–318
Egomotion, 271–280
Electric power networks, 449–460
Engineering
    applications, 413–421
    implementations, 527–537
Episode analysis, 53–60
Estimation, 499–514
Expert systems, 129–145, 309–318, 319–331, 355–364, 413–421, 449–460, 515–525, 527–537, 561–567, 709–721,

F
Fail-safe stability, 625–632
Failure identification, 499–514
Fast sampling, 633–642
Fault
    tolerance, 615–623
    diagnosis, 35–51, 353–364, 391–399, 703–708
Fault-trees, 449–460
Feature selection, 633–642
FEM, 211–221
Fibre optics, 319–331
Formal methods, 615–623
Fuzzy
    expert systems, 423–433
    linguistic control, 201–209
    logic, 25–34, 281–298, 483–498, 643–650
    logic applications, 657–664
    relations, 201–209
    sets, 379–390
    systems, 499–514, 601–613
G
Generalization, 391–399
Generalized delta rule (GDR), 211–221
Genetic algorithms, 177–189, 261–269, 601–613, 671–680
Global
    optima, 223–227
    optimization, 665–670
H
Handwriting recognition, 469–472
Heat exchanger networks, 115–127
Heuristic
    methods, 61–69
    searches, 223–227
Heuristics, 147–156
High-speed signal processing, 633–642
Hybrid systems, 515–525, 681–688
I
Identification, 499–514
Implementation issues, 413–421
In-store automation, 81–90
Inference, 281–298

Inference engines, 449–460
Integrated systems, 401–412
Intelligent
    control, 413–421, 527–537
    design environments, 115–127
Internal model control, 483–498, 689–701
Intervals/points, 97–99

K
Knowledge
    acquisition, 1–13, 333–344, 391–399
    elicitation, 15–24
    engineering, 709–721
    representation, 15–24, 53–60
Knowledge-based systems, 35–51, 61–69, 147–156, 435–447, 601–613
Knowledge bases, 391–399, 449–460

L
Language analysis, 345–354
Large-scale systems, 201–209
Learning
    algorithms, 191–199
    systems, 299–308
Least
    median squares, 177–189
    squares, 177–189
Load predictions, 423–433
Logic
    paths, 539–547
    programming, 345–354

M
Madaline network, 569–578
Man-machine systems, 299–308
Manual control modelling, 299–308
Manufacturing floor conflict problems, 169–175
Markovian minimal cut sets, 449–460
Material design, 15–24
Mathematical morphology, 281–298
Metagrammers, 345–354
Metal casting design, 561–567
Mobile robots, 91–95
Model
    identification, 299–308
    reduction, 549–559
Multi-robot systems, 169–175
Multi-sensor integration, 25–34
Multilayer perceptions, 211–221
Multivariable systems, 201–209

N
Network
    architectures, 211–221
    fault-diagnosis, 703–708
    management, 703–708
    optimization, 333–344
Neural-network control, 625–632
Neural
    net training, 71–80
    networks, 35–51, 81–90, 129–145, 191–199, 299–308, 483–498, 579–588, 601–613, 615–623, 689–701

Neuro-fuzzy computing, 423–433
Non-interview techniques, 15–24
Non-linear
    black-box modelling, 71–80
    control, 483–498
Nondestructive testing, 309–318
Nonlinear process control, 689–701
Nuclear power plants, 309–318

O
Object motion prediction, 569–578
Object-orientated programming, 461–467
Object-oriented programming techniques, 115–127, 561–567
Observers, 261–269
Obstacle
    avoidance, 91–95
    detection, 271–280
Optical fibre communications, 319–331
Optimization, 129–145
Optoelectronics design, 319–331

P
Paper models, 15–24
Parallel algorithms, 515–525
Parsimonious covering theory, 703–708
Path searches, 539–547
Pattern
    matching, 449–460
    recognition, 469–472
Petri nets, 169–175, 643–650
Planning and reasoning, 401–412
Principal component analysis, 633–642
Process
    control, 53–60, 251–260, 299–308, 483–498
    control and monitoring, 643–650
    models, 435–447

Q
Qualitative
    model, 549–559
    modelling, 35–51
    simulation, 379–390
Quantitative prediction, 569–578

R
Realsitic Abductive Reasoning Model, 703–708
Real-time
    AI, 243–250
    computing, 251–260
    control, 243–250, 615–623
    expert systems, 643–650
    navigation, 91–95
Reliability, 449–460
Reverse engineering, 345–354
Rule-based inferencing, 435–447
Rule induction, 333–344

S
Safety, 251–260
Safety-critical systems, 53–60, 601–613

Safety
in control systems, 243–250
systems, 615–623
Scheduling, 147–156
Security assessment, 657–664
Sensor monitoring, 35–51
Separation process, 549–559
Signal processing, 309–318
Signed directed graph, 549–559
Simulated annealing, 61–69, 665–670
Skeletal legs, 281–298
Slant correction, 469–472
Software
comprehension, 345–354
engineering, 345–354, 709–721
safety, 601–613
testing, 671–680
tools, 643–650
Spacecraft attitude control, 651–656
State estimators, 261–269
Steam generator, 309–318
Stochastic dependencies, 449–460
STR (state transition rule) method, 157–168
Structure-from-motion, 271–280
Structural identification, 211–221
Synthesis, 435–447
System
identification, 71–80
reliability, 651–656

T

Telecommunication service interaction, 157–168
Temporal
algebra, 681–688
logic, 251–260
reasoning, 53–60
relationships, 53–60, 97–99
Testing
of expert systems, 539–547
patterns, 211–221
Thinning, 281–298
Time series modelling, 423–433
Tool life criteria, 579–588
Topological design, 61–69, 333–344
Training patterns, 211–221
Trend analysis, 35–51
Turbine blades, 25–34
Tutorials, 319–331

U

User interfaces, 449–460

V

Verification of AI-based control systems, 243–250
Vibratory feeding, 1–13
Voltage stability, 657–664
Voting, 615–623

W

Wavelet decomposition, 579–588
Working memory, 449–460

Author Index for Volume 8
